Standard
 Medium (+75)
 High, stance control (+200)

ANKLE COMPONENT

AFO Type:

EZ- APO (Anterior OTS)
 EZ - OP (Posterior OTS)
Custom _____
Other _____
(Additional charges may apply)

AFO Size:

X-Small
 Small
 Medium
 Large

ADDITIONAL OPTIONS

Custom Design (up to +500)
 Additional Engraving (+50-100)
 Extra Padding (+50)
 Gel Padding (+50)

ATTACHMENT

Permanent - Pre-drilled holes with barrel bolts, optionally assembled
 Rapid Detachment - Side lock with snapping caps (+100)

*Please include details for any customization in the special instructions box.

SPECIAL INSTRUCTIONS

SCANNING INSTRUCTIONS

1. The patient should stand with their leg straight throughout the scan. It is important that they are bearing weight on the leg as well. The scan should start from the inside of the leg with the camera angled so that it is capturing the knee in the center of the screen. Then scan should capture the leg from the foot to 8" above the patella.
2. Press the circular button located at the bottom of the screen and wait until the countdown has finished before moving the phone around the leg from the inside toward the outside in a slow, steady sweeping motion, keeping the phone level as you go.
3. Ideally, you want to capture a full 360 degrees of the leg being scanned; however, 270 degrees will typically provide enough information to accurately depict the curvature of the leg. When you are confident that you have captured at least 270 degrees of their leg, you can end the scan by pressing the circular button at the bottom of the screen.
4. Draw a **“+”** on the center of the knee cap and tap “take picture.” Take the photo straight on and confirm the image once you have a clear photo.
5. Enter the patient’s first name, last name, and email address. Tap “Send Scan” to submit.
